The diagnosts of disease, and also as a therapeutic. It is useful for acreening drugs effective in the treatment of symptomatic or phenotypic acreening drugs effective in the treatment of symptomatic or phenotypic manifestations perturbing the normal function of MHP in the body. The MHP mucleotide sequences are useful for generation of antibodies, as reagents in diagnostic assays, for the identification of other cellular gene products related to human kinases, and as reagents in assays for screening compounds that are useful for treating mental, biological or medical disorders. MHP oligonucleotides are used as probes. The labelled NHP probes are useful for screening human genomic library for identifying polymorphisms and as primers in amplification assays to detect mutations within the exons, introns and splice sites that can be used in diagnostics and pharmacogenomics. Nucleotide construct encoding NHP produces are used to genetically engineer cells in vivo that functions as bioreactors in the body delivering a continuous supply of NHP to the body. Nucleotide constructs encoding functional NHPs are used in gene therapy for the modulation of NHP expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

The present sequence is a cDNA encoding novel human protein (NHP) known as human kinases. The human kinases share structural similarity with animal kinases, more particularly serine or threonine protein kinases. Human kinase cDNA is useful for the detection of mutant human kinase for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 ATGGAAAAGTATGAAAATTAGCTAAGACTGGAGAAGGGTCTTATGGGGTTGTATTCAAA

```

```
The present sequence is a cDNA encoding novel human protein (NHP) known as human kinase. The human kinases share structural similarity with animal kinases, more particularly serine or threonine protein kinases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /*tag= a

                                                                                                                                                                                                                                                                                                                                                                            g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               as human kinase. The human kinases share structural similarity with animal kinases, more particularly serine or threonine protein kinases. Human kinase of the detection of mutant human kinase for the diagnosis of disease, and also as a therapeutic. It is useful for the diagnosis of disease, and also as a therapeutic. It is useful for screening drugs effective in the treatment of symptomatic or phenotypic aniforation of NHP in the body. The NHP nucleotide sequences are useful for generation of antibodies, as reagents in diagnostic assays, for the identification of other cellular gene products related to human kinases, and as reagents in assays for screening compounds that are useful for treating mental, biological or screening compounds that are useful for treating mental, biological or medical disorders. NHP oligonucleotides are used as probes. The labelled NHP probes are useful for screening human genomic library for identifying colymorphisms and as primers in amplification assays to detect mutations within the exons, introns and splice sites that can be used in diagnostics and pharmacogenomics. Nucleotide construct encoding NHP to the body delivering a continuous supply of NHP to the body. Nucleotide constructs encoding functional NHPs are used in gene therapy for the modulation of NHP expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        420

the diagnosis of disease, and also as a therapeutic. It is useful for the diagnosis of disease, and also as a therapeutic. It is useful for screening drugs effective in the treatment of symptomatic or phenotypic manifestations perturbing the normal function of NHP in the body. The NHP nucleotide sequences are useful for generation of antibodies, as reagents in diagnostic assays, for the identification of other cellular gene products related to human kinases, and as reagents in assays for screening compounds that are useful for treating mental, biological or medical disorders. NHP oligonucleotides are used as probes. The labelled NHP probes are useful for screening human genomic library for identifying polymorphisms and as primers in amplification assays to detect mutations within the exons, introns and splice sites that can be used in diagnostics and pharmacogenomics. Nucleotide construct encoding NHP products are used to genetically engineer cells in vivo that functions as bioreactors in the body delivering a continuous supply of NHP to the continuous continuou therapy for the modulation of NHP expression

m Zambrowicz Friedrich G, Donoho G, Turner CA, Nehls M, Sands AT;

WPI; 2001-266166/27. P-PSDB; AAE00492. New isolated human kinase polynucleotide useful for generating antibodies, as reagents in diagnostic assays and for screening for compounds useful for treating mental, biological or medical diseases.

Disclosure, Page 29-30; 38pp; English.

for The present sequence is a cDNA encoding novel human protein (NHP) known as human kinase. The human kinases share structural similarity with animal kinases, more particularly serine or threonine protein kinases. Human kinase cDNA is useful for the detection of mutant human kinase for the diagnosis of disease, and also as a therapeutic. It is useful for

screening drugs effective in the treatment of symptomatic or phenotypic manifestations perturbing the normal function of NHP in the body. The NHP nucleotide sequences are useful for generation of antibodies, as reagents in diagnostic assays, for the identification of other cellular gene products related to human kinases, and as reagents in assays for screening compounds that are useful for treating mental, biological or medical disorders. NHP oligonucleotides are used as probes. The labelled NHP probes are useful for screening human genomic library for identifying polymorphisms and as primers in amplification assays to detect mutations within the exons, introns and splice sites that can be used in diagnostics and pharmacogenomics. Nucleotide construct encoding NHP products are used to genetically engineer cells in vivo that functions as bioreactors in the body delivering a continuous supply of NHP to the body. Nucleotide constructs encoding functional NHPs are used in gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         360

Ding SR;

treatment of cancer, immune disorder, growth and developmental disorder, cardiovascular disorder and lipid disorder.

Page 183; 196pp; English. Claim 5;

The present invention relates to an isolated human kinase polypeptide (PKIN) or a biologically active/immunogenic fragment of PKIN. PKIN is useful for diagnosing, treating and preventing cancer (e.g., leukaemia, I vamphoma, melanoma), an immune disorder (e.g., acquired immunodeficiency syndrome (AIDS), Addison's disease, allergy, anaemia, asthma, Crohn's disease, rheumatoid arthritis), a growth and developmental disorder (e.g. bursitis, cirrhosis, hepatitis, psoriasis, Cushing's syndrome), a cardiovascular disorder (e.g., atherosclerosis, hypertension, myocardial infarction), and a lipid disorder (e.g., fatty liver, cholestasis, Gaucher's disease, Niemann-Pick's disease). PKIN is useful for creating knockin humanised animals or crimine gene therapy, to type. PKIN is useful for creating knockin humanised animals or transgenic animals to model human diseases, in sometic or germline gene therapy, to generate a transcript image of a tissue or cell type, for detecting calfeferences in the chromosomal location due to translocation, inversion, etc., among normal, carrier or affected individuals, and as hybridisation probes for mapping naturally occurring genomic sequences. PKIN is useful for some or an orther manlysis, dot blot or other membrane-based technologies, in PCR technologies, in pCR technologies, pin will informat enzyme linked immunosorbent (ELISA)-like assays and in microarrays utilising reason teaminance is human bytra.) present sequence is human PKIN-10 cDNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to the CDNA and protein sequences of fifty six polynucleotides for diagnostics and therapeutics (DTHP). The human DITHP CC polynucleotides and polypeptides are useful for diagnosing, preventing or treating diseases associated with, as well as effects of exogenous compounds, on the expression of human molecules, such as cell compounds, on the expression of human molecules, such as cell proliferative diseases (e.g. cancer, arteriosclerosis atherosclerosis, proliferative diseases (e.g. cancer), autoimmune/inflammatory diseases (e.g. anaemia, asthm, autoimmune thyroiditis, Crohn's disease, diabetes complitus, glomerulonephritis, gout, multiple sclerosis, rheumatoid arthritis, uveitis, acquired immunodeficiency disease, dementia, arthritis, uveitis, acquired immunodeficiency disease, dementia, neurological disorders (e.g. strock, Alzheimer's disease, dementia, complitues, cirrhosis), reproductive (e.g. infertility, endometriosis), concorring disorders (e.g. hyperparathyroidism, hypercholesterolaemia, hyposlycaemia, hyperlipidemia, obesity), connective tissue disorders (c.g. intergration), practice syndromel, or infertility, endometrion, critical, fungal, paramitic, protozoal). The DITHP sequences may be used to generate hybridisation probes useful in chromosomal mapping of naturally constitue markers, or as antigen to elicit an immune response. The polymucleotides are useful as molecular expressents a human diagnostics and therapeutics (DITHP) cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ATCCAAATCTTGTGAACCTCATCGAGGTGTTCAGGAGAAAAAGGAAAATGCATTTAGTTT 238

                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAS06701-AAS06757 encode for novel human protein kinases #1-57. The novel protein kinases have been identified as members of the tyrosine or scrine/threonine kinase (PTK and STK) families. The polynucleotides encoding protein kinase and the polypeptides may be used in the prevention, diagnosis and treatment of disease associated with impapropriate kinase expression. For example, they may be used to treat cancers (especially cancers of haematopoletic origin), cardiovascular disease (e.g. atheroselerosis), metabolic disorders (e.g. diabetes), immune related diseases (e.g. rheumatoid arthritis), neurological disorders (e.g. disbetes), inflammatory disorders (e.g. asthma), infectious disease (e.g. HIV) and reproductive disorders (e.g. infertility). Additionally, polymucleotides encoding protein kinases may be used for gene therapy and as DNA probes in disponstic assays. The protein kinase polypeptides may be used as antigens in the production of antibodies against the protein kinases and in assays to identify modulators of protein kinase expression and activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ઠ
                                                                                                                                                                                                                                                                                                                                                                       The present sequence encodes a novel human protein (NHP) which is a human kinase. A polymorphism was identified in the 3' UTR of the present sequence. The human kinases share structural similarity with animal kinases. More particularly serine or threenine protein kinases. Human kinase cDNA is useful for the detection of mutant human kinase for the diagnosis of disease, and also as a therapeutic. It is useful for screening drugs effective in the treatment of symptomatic or phenotypic manifestations perturbing the normal function of NMP in the body. The NHP conclocide sequences are useful for generation of antibodies, as reagents products related to human kinases, and as reagents in assays for screening compounds that are useful for treating mental, biological or screening disorders. NHP oligonucleotides are used as probes. The labelled NHP probes are useful for screening human genomic library for identifying polymorphisms and as primers in amplification assays to detect mutations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          within the exons, introns and splice sites that can be used in diagnostics and pharmacogenomics. Nucleotide construct encoding NHP products are used to genetically engineer cells in vivo that functions as bioreactors in the body delivering a continuous supply of NHP to the body. Nucleotide constructs encoding functional NHPs are used in gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GGAGTGATCAAAAGCGTATTATGGCAAACACTTCAAGCTCTTAATTTCTGTCATATACAT 360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             257
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             377
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GATCCTGTTGTTAAGAAAATAGCACTAAGAGAAATACGTATGTTGAAGCAATTAAAACAT 317

New human kinases and phosphatases, useful for diagnosing, treating or preventing atherosclerosis, hypertension, AIDS, allergy, multiple sclerosis, osteoarthritis, Alzheimer's disease, Crohn's disease, cancer or hepatitis.

Claim 5; SEQ ID NO 104; 347pp; English.

kinase and phosphatase (KPP). The polypeptide which is a human kinase and phosphatase (KPP). The polypeptide of the invention demonstrates cardiovascular, antiarteriosclerotic, hypotensiave, vasotropic, antianflammatory, antianginal, anti-HIV, antiallergic, antianflammatory, antianginal, antiallergic, antianflammatory, antison, antianginal, antiallergic, antianterior, antiangentic, antiangentic, antiangentic, antiangentic, antiangentic, antiparkinsonian, nootropic, anticonvulsant, hepatotropic, antipsoriatic, antiparkinsonian, nootropic, anticonvulsant, hepatotropic, antipsoriatic, antipacterial, virucide, protozoacide and fungicide activities. The kinase and phosphatase (KPP) polynucleotides, polypeptides, agonists and antibacterial, virucide, protozoacide and fungicide activities. The kinase and phosphatase (KPP) polynucleotides, polypeptides, agonists and antibacterial, virucide, protozoacide and fungicide activities. The kinase and phosphatase (KPP) polynucleotides, polypeptides, agonists and antibacters may be useful for diagnosing, treating or preventing contents such as cardiovascular diseases, immune system disorders, disorders affecting growth and development, cell glosofers and viral, bacterial, fungal, parasitic, protozoan or helminthic infections. Furthermore, the molecules of the invention may be useful for creating transgenic animals to model human key proma of the invention may be useful for creating transgenic animals to model human key proma of the invention and the proma of the human key proma of the human key proma of the human key proma of the human key control the proma of the human key control of the human key control of the human key control of the human key control of the human key control of the human key control of the human key control of the human key control of the human key control of the human key control of the human key control of the human key control of the human key control of the human key control of the human key control of the human key control of the human key control of KPP CDNA of the invention.

The 14257 protein is a protein kinase that acts as a modulating agent in regulating a variety of cellular processes, including cell proliferation, differentiation, growth and division. The activity of the protein of the invention may be described as, cytostatic, osteopathic; hepatotropic; antidiabetic; neuroprotective; antiarthritic; dermacological; immunosuppressive; antialfammatory; antithyroid; antipporiatic; ophthalmological; antiallergic; antiatchyrimic; antiatherosclerotic; hypotensive; vasotropic; antiarrhythmic; virucide; anorectic; metabolic; immunomodulator and analgesic. The protein of the

invention may act as a novel diagnostic target or therapeutic agent controlling certain disorders, for example kinase-associated or other 14257-associated disorders. These may include cellular proliferative disorders such as cancers e.g. acute lymphoblastic leukemia or Hodgkin's disease. Other disorders include bone metabolism disorders such as osteoporosis, disorders of the immune system, e.g. inflammatory diabetes mellitus, osteoarthritis and asthma. Proteins of the invention may also be of use as therapeutic agents in cardiovascular disorders such as hypertension and coronary artery disease, and some endothalial cell disorders, including psoriasis. The current sequence represents a human kinase 14257 cDNA

preventing atherosclerosis, hypertension, AIDS, allergy, multiple sclerosis, osteoarthritis, Alzheimer's disease, Crohn's disease, cancer New human kinases and phosphatases, useful for diagnosing, treating or hepatitis.

Claim 5; SEQ ID NO 94; 330pp; English.

The present sequence encodes a human kinase and phosphatase (KPP)

C protein. KPP sequences have cardiovascular, antiarteriosclerotic,

C hypotensive, vacotropic, antiinflammatory, antianginal, anti-HIV,

antiallerotic, antiathmatic, immunosuppressive, antithyroid,

The KPP and polymuclectides are also useful in assessing the effects of exogenous compounds on the expression of nucleic acids and kinases and phosphatases, or for facilitating the drug discovery process, including determination of efficacy, dosage, toxicity and pharmacology. The polymuclectides encoding KPP are useful for creating transgenic animals to model human disease. 70 ATGGAAAAGTATGAAAAATTAGCTAAGACTGGAGAAGGGTCTTATGGGGTTGTATTCAAA TGCAGAAACAAAACCTCTGGACAAGTAGTAGCTGTTAAAAAATTTGTGGAATCTGAAGAT 490 AAGATTTGTGACTTCGGGTTTGCACAAATTCTGAACACAGTGTTTCACCATGGGGCCCAG 1 ATGGAAAAGTATGAAAATTAGCTAAGACTGGAGAAGGGTCTTATGGGGTTGTATTCAAA 121 GATCCTGTTGTTAAGAAATAGCACTAAGAGAAATACGTATGTTGAAGCAATTAAAACAT 190 GATCCTGTTGTTAAGAAATAGCACTAAGAGAAATACGTATGTTGAAGCAATTAAAACAT 250 CCAAATCTTGTGAACCTCATCGAGGTGTTCAGGAGAAAAGGAAAATGCATTTAGTTTTT GGAGTGATCAAAAGCGTATTATGGCAAACACTTCAAGCTCTTAATTTCTGTCATATACAT GCTCATCTCGAACTTCTGGCCTCAAGTGATCCTTCCACCTCGGCCTCCCAAAGTGCTGGA 670 CAAGATIGITITIAGIGGAACACAATITICGAACAAATITCITIGAGAACGCATICCAGGAG 181 CCAAATCTTGTGAACCTCATCGAGGTGTTCAGGAGAAAAGGAAAATGCATTTAGTTTTT 370 GGAGTGATCAAAAGCGTATTATGGCAAACACTTCAAGCTCTTAATTTCTGTCATATACAT AAGATTTGTGACTTCGGGTTTGCACAAATTCTGATTCCAGGAGATGCCTA-----511 CTTCTTGTGGGAGATACTCAGTATGGTTCTTCAGTCGATATATGGGCTA-----610 Tracaagrereadeceadeceadeceadecaarrrrreaaacaaraacreagagerea 560 --------TIGGITGTGTTTTTGCAGAGCTCTTGACAGGCC --GCCACTGTGGCCTGGAAAATCAGATGTGGACCAACTTTATCTG 730 ATGCCTACACCGATTGTGTAGCTACGAGATGGTACCGAGCTCCTGAACTTCTTGTGGGAG ATAATCAGAACACTAGTAGAGACG-------GGGTTTCGCCATGTTGACCAG 790 ATACTCAGTATGGTTCTTCAGTCGATATGGGCTATTGGTTGTGTTTTTGCAGAGCTCCTG --------CACCGATTATGTAGCTACGAGATGGTACCGAGCTCCTGAA Gaps . 66 Length 1429; Sequence 1429 BP; 466 A; 286 C; 294 G; 383 T; 0 U; 0 Other; Indels or cancer), / Match 58.0%; Score 604; DB 12; Local Similarity 75.6%; Pred. ```
This invention describes a novel disease detection and treatment molecule polypeptide (MDDT) which has anti-inflammatory, immunosuppressive, cateopathic, cytostatic, anti-inflammatory, immunosuppressive, cateopathic, cytostatic, anti-infly, haemostatic, nephrotropic, cateopathic, cytostatic, anti-inflammatory of anti-inflammatory. The polymeria of the invention can be used for gene therapy, crotein replacement therapy and are useful for treating a variety of diseases or conditions. These polymetides or polymucleotides are particularly useful for diagnosing, treating or preventing cell proliferative disorders (e.g. cancers including adenocarcinoma, cell-enkamia, lymphoma, malanoma, myeloma or sarcoma), anaemia, Crohn's disease, acquired immunodeficiency syndrome (ALDS), Goodpasture's syndromes, inflammation, osteoporosis, thrombocytopaenia, psoriasis or hepatitis. ABX34440-ABX34835 encode the MDDT polypeptides represented in ABU11450-ABU11845, described in the disclosure of the invention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from MIPO at
                                                                                                                                                                                                                                                                                                                                                                                   Query Match 52.2%; Score 543.2; DB 8; Length 1281; Best Local Similarity 99.5%; Pred. WPI; 2001-032161/04. P-PSDB; AAB65642 Nucleic acids encoding kinase polypeptides, useful for diagnosing and treating immune-related diseases and disorders, cardiovascular disease, neurodegenerative diseases and/or cancers.

Example 4; Fig 2; 310pp; English.

The present sequence encodes a novel protein kinase. The nucleic acids and the protein kinases they encode may be used in the treatment and disgusses associated with inappropriate kinase expression such as immune-related diseases and disorders, cardiovascular disease, complementary sequences may also be used as DNA probes in diagnostic assays. The kinase polypeptides may be used as antigens in the production of antibodies of kinase expression and activity. Anti-kinase antibodies expression and activity. Diseases related to kinase expression and cartivity. Diseases related to kinase expression and activity include rheumatorid arthritis, atherosclerosis, autoimmune disorders, camplications of organ transplantation, myocardial infarction, immune disorders, cardiomyopathies, strokes, renal failure, oxidative-stress related disorders, chronic inflammatory bowel disease, chronic inflammatory pelvic disease, multiple sclerosis, asthma, ostecarthritis, perials, rhinitis, rhinitis, atheometers and reproductive

                                                      AAD03812
                                                                                             base pairs (bp) targeted to a nucleic acid encoding MARK3

(MAP/microcubule affinity-regulating kinase 3), that specifically
hybridises with the nucleic acid encoding MARK3 and inhibits expression
of MARK3, i.e. is an antisense oligonucleotide (AO). Also included are a
composition comprising the compound and a carrier or diluent, inhibiting
the expression of MARK3 in cells or tissues, treating an animal having or
suspected of having a disease or condition associated with MARK3 and
screening for an antisense compound. The antisense oligonucleotide is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              944

The present sequence is a cDNA encoding novel human protein (NHP) known as human kinases. The human kinases share structural similarity with animal kinases, more particularly serine or threonine protein kinases. Human kinases cDNA is useful for the detection of mutant human kinase for the diagnosis of disease, and also as a therapeutic. It is useful for screening drugs effective in the treatment of symptomatic or phenotypic manifestations perturbing the normal function of NHP in the body. The NHP nuclectide sequences are useful for generation of antibodies, as reagents in diagnostic assays, for the identification of other cellular gene produces related to human kinases, and as reagents in diagnostic assays, for the identification of other cellular gene produces related to human kinases, and as reagents in diagnostics. NHP oligonucleotides are used as probes. The labelled medical disorders. NHP oligonucleotides are used as probes. The labelled the probes are useful for screening human genomic library for identifying polymorphisms and as primers in amplification assays to detect mutations within the exons, introns and splice sites that can be used in classocial are used to genetically engineer cells in vivo that functions as body. Nucleotide constructs encoding functional NHPs are used in gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

Computational Analysis of Full-Length Mouse cDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)
Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)
RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)
Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)
CDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in Riken Division of Experimental Animal Research in Riken contributed to
          Arakawa,T., Fukuda,S., Hara,A., Hashizume,W., Imotani,K., Ishii,Y., Itoh,M., Kagawa,T., Miyazaki,A., Sakai,K., Sasaki,D., Shibata,K., Shinagawa,A., Yasunishi,A., Yoshino,M., Waterston,R., Lander,E.S., Rogers,J., Birney,E. and Hayashizaki,Y.
Analysis of the Mouse transcriptome based on functional annotation of 60,770 full.length cDNAs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sciences Center(GSC), Yokohama Institute

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /noce="Organ: Lung; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site 1: EcoR 1; Site 2: Not 1; U.C.Pull is a normalized cDNA library containing the following tissue (a): Primary Lung Epithelial Cells The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library as sequence that is located between the Not I site and the (dT)la tail. The sequence tag for this
                                                                                                                                                                                                                                                                        BU686325

/note="Organ: whole embryo; Vector: pBluescript II KS(+);
Site.l: ECGRI; Site.2: Noti; This normalized library was
constructed from 1 million independent clones. cDNA
synthesis was initiated using an oligo(dT) primer, using
methylated C in the first strand synthesis reaction.
Following this first strand synthesis reaction.
Following this first strand synthesis reaction.
Following this first strand caction, double-stranded cDNA
was blunted, ligated to Not! adapters, digested with
ECGRI, size-selected, and cloned into the Not! and ECGRI
compatible sites of a custom modified MCS of the
pBluescript (KS+) vector. The library was normalized in 2
rounds using conditions adapted from Soares et al., PNAS
(1994) 91: 9228-9212 and Bonaldo et al., Genome Research 6
(1996): 791, except that a significantly longer
reannealing hybridization was used."
